Office Action Summary

Application No.

10/623,779

Applicant(s)

GENGER ET AL.

Examiner

AARON J. LEWIS

Art Unit

3743

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08/15/2005 (AMENDMENT).
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 and 18-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 14, 15 and 18-20 is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082).

As to claim 1, Rapoport et al. disclose an anti-snoring device comprising a compressor (84,86) and a tube loop (108) connected to said compressor, and said compressor providing compressed air to said tube loop, and wherein said tube loop has two prongs (figs.20 and 21) for administering said compressed air into a sleeping person's nostrils, said prongs loosely entering into said sleeping person's nostrils during use, and wherein said tube loop and said two prongs form a snore-reducing nasal air cannula.

The differences between Rapoport et al. and claim 1 are said tube loop has a length and diameter that are adapted to the sleeping person's anatomy so that said tube loop is guided between the sleeping person's head and auricles and abuts against the sleeping person's upper lip and wherein a ring mechanically connects said two sections of said tube loop and aid ring abuts the sleeping person during use.

Blackmer, in a nasal cannula, teaches said tube loop has a length and diameter that are adapted to the sleeping person's anatomy (fig.2) so that said tube loop is guided

Art Unit: 3743

between the sleeping person's head and auricles and abuts (#18) against the sleeping person's upper lip and wherein a ring (15) mechanically connects said two sections of said tube loop and aid ring abuts the sleeping person during use for the purpose of providing an improved nasal cannula which is quickly and easily form-fitted to individual users (col.1, lines 44-47).

It would have been obvious to modify the nasal cannula of Rapoport et al. to include a tube loop that is guided between the sleeping person's anatomy so that the tube loop is guided between the sleeping person's head and auricles and abuts (#18) against the sleeping person's upper lip and wherein a ring (15) mechanically connects said two sections of said tube loop and aid ring abuts the sleeping person during use because it would have provided an improved nasal cannula which is quickly and easily form-fitted to individual users as taught by Blackmer.

As to claim 5, Rapoport et al. disclose said compressor comprises a control (82) controlling the angular speed of a turbine of said compressor, thereby controlling the flow of air through the nasal air cannula.

As to claim 8, the dimensions of the tube of Rapoport et al. can be arrived at through mere routine obvious experimentation and observation with no criticality seen in any particular dimensions including an inside diameter of 10mm. One of ordinary skill would recognize that factors affecting the tube dimensions are patient age and size as well as compressor size. It would have been obvious to employ a tube size sufficient to deliver a safe and appropriate pressure/flow rate of therapeutic gas to a given patient in dependence upon patient age and size.

Claim 9 is substantially equivalent in scope to claim 8 and is included in Rapoport et al. for the reasons set forth above with respect to claim 8.

As to claim 13, Rapoport et al. as modified by Blackmer as discussed above with respect to claim 1 also discloses a Y-junction (13), the Y-junction abuts the sleeping person (fig.2) during use.

3. Claims 2,3,10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082) as applied to claims 1,5,8,9,13 above, and further in view of Daniell et al. ('260).

The difference between Rapoport et al. as modified by Blackmer and claim 2 is the compressed air being fed through an air humidifier before reaching the nasal air cannula.

As to claim 2, Daniell et al., in an anti-snoring device (figs.1 and 2), teach said compressed air is fed through an air humidifier before reaching the nasal air cannula for the purpose of preventing dehydration of the airways and nasal passages (col.1, lines 30-40 and col.2, lines 4-14).

It would have been obvious to modify the anti-snoring device of Rapoport et al. to include an air humidifier for humidifying the compressed air before reaching the nasal air cannula because it would have prevented dehydration of the airways and nasal passages as taught by Daniell et al..

As to claim 3, Daniell et al. teach the air humidifier comprises a water bath (6) and a temperature control (9) controlling the temperature of the water bath and hence the degree of air humidification.

Claim 10 is substantially equivalent in scope to claim 8 and is included in Rapoport et al. for the reasons set forth above with respect to claim 8.

4. Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082) as applied to claims 1,5,8,9,13 above, and further in view of Zapf ('619).

The difference between Rapoport et al. as modified by Blackmer and claim 4 is the tube being long enough so that the compressor may be located not in a bedroom where said sleeping person sleeps but in an adjacent room.

Zapf teaches a treatment air delivery tube (13) that is long enough so that the treated air generator (1,2,5,6) may be located not in a bedroom where said sleeping person sleeps but in an adjacent room for the purpose of providing treated breathable air to a plurality of patients in different rooms on a given floor and/or on different floors (page 1, lines 27-36).

It would have been obvious to modify Rapoport et al. to employ a length of air delivery tube such that the compressor may be located not in a bedroom where said sleeping person sleeps but in an adjacent room because it would have enabled centralized location of treatment air generator and the provision of treated breathable air to a plurality of patients located in different parts of the same dwelling as taught by Zapf.

Claim 11 is substantially equivalent in scope to claim 4 and is included in Rapoport et al. as modified by Zapf for the reasons set forth above with respect to claim 4. Rapoport et al. as modified by Zapf additionally teaches a humidifier which is in the vicinity (i.e. within an adjacent room) of a sleeping person.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082) as applied to claims 1,5,8,9,13 above, and further in view of Buck et al. ('131).

The difference between Rapoport et al. as modified by Blackmer and claim 6 is a throttle valve controlling pressure drop across said tube and thereby flow of air through the tube.

Buck et al., in a ventilator that includes a continuous positive airway mode (col.13, lines 11-27) teach a manually operable throttle valve (49) valve controlling pressure drop across said tube (50,52) and thereby flow of air through the tube.

It would have been obvious to modify the tube of Rapoport et al. to include a throttle valve on the tube because it would have provided a manually operable means for adjusting the pressure and flow of breathable gas being delivered to a patient as taught by Buck et al..

6. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082) as applied to claims 1,5,8,9,13 above, and further in view of Panzik et al. ('540).

The difference between Rapoport et al. as modified by Blackmer and claim 7 is a bypass valve running from the tube into ambient in a manner that flow of air through the nasal air cannula is controlled by said bypass valve.

Panzik et al., in a anti-snoring device, teach is a bypass (22) valve running from the tube into ambient in a manner that flow of air through the nasal air cannula is controlled

by said bypass valve for the purpose of providing a mixture of ambient air with therapeutic gas (col.2, lines 34-61).

It would have been obvious to modify the tube of Rapoport et al. to include a bypass valve running from the tube into ambient because it would have provided a mixture of ambient air with therapeutic gas as taught by Panzik et al..

7. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rapoport et al. ('502) in view of Blackmer ('082) and Daniell et al. ('260) as applied to claims 2,3,10 above, and further in view of Colla et al. (834).

The difference between Rapoport et al. as modified by Blackmer and Daniell et al. and claim 12 is the compressor and air humidifier being integrated into one apparatus.

Colla et al. (fig.1b), in an anti-snoring device, teach the compressor and air humidifier being integrated into one apparatus for the purpose of providing a convenient selective coupling arrangement for optionally adding/deleting a humidifier.

It would have been obvious to modify Rapoport et al. to include the compressor and an air humidifier integrated into one apparatus because it would have provided a convenient selective coupling arrangement for optionally adding/deleting a humidifier as taught by Colla et al..

Allowable Subject Matter

8. Claims 14,15,18-20 are allowed.

Response to Arguments

9. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The balance of the art is cited to show relevant tube loops and nasal cannulae.

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

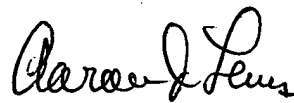

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AARON J. LEWIS whose telephone number is (571) 272-4795. The examiner can normally be reached on 9:30AM-6:00PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, HENRY A. BENNETT can be reached on (571) 272-4791. The fax phone
